

Cre8 Associates Limited

Electrical Engineering

Power and data solutions for the commercial, aerospace and military market sectors, designed and manufactured in both off the shelf and custom formats.

We design and build bespoke vehicle wiring harnesses for covert and military applications. Vehicle integration, installation and testing are also available at our fully equipped facility in Leicestershire or at our customers premises any where in the world.

Cre8 Associates have a full diagnostic capability for C.A.N. and other diagnostic protocols as well as RF and Electrical functionality.

Our capabilities do not just stop at the normal designing and producing of systems for fitment but we pride ourselves in the production of systems that are plug-and-play for the installer to quickly integrate into the vehicle. If we are not installing the system, we visit and discuss your requirements, work on the platform to ascertain the exact requirements from connectors to environmental aspects, then we produce a system and install the first ourselves to ensure that you can receive from us as a fully install-ready product. Our engineers are always on hand to help and advise on any of the issues you may encounter.

Our electrical engineering experience covers:

- Vehicle Electrical systems on Military and COTS vehicles
- Multiplex CAN systems
- RF Cabling and Antenna evaluation and installations
- Specialist systems design and manufacture
- Manufacture of Military Harnesses
- Manufacture of RF Cabling systems
- Power Distribution units for vehicles
- Installation of Power Generation and distribution systems from our partner companies
- Full in house integration capabilities

*Problematic Issues?
